NPS SCORE

-9,85

Conclusion:

- Different Municipals return a different level of correlation between variables, coded based on questionnaire data.
- Demographic variables** (Code starting with **D**) did not return a strong correlation.
 - The top 3 strongest correlations are between **Taxation** (T1), **Municipal Service Satisfaction** (SA3), and **Municipal Recommendation** (SA1)
 - This could become a good benchmark for future questionnaire.

INFORMATION

MUNICIPAL CITIZEN SATISFACTION

NATIONWIDE BENCHMARK SURVEY

DATA BY: ALEX MAZANIK, CAIP (CRG)

RESEARCH QUESTION:

What factors affecting Municipal Satisfaction in Canada?

FINDINGS:

The survey, conducted with 2,730 participants from across Canada, primarily included responses from Ontario (38%). Overall, municipal satisfaction is rated as somewhat satisfied (3), though regions like Nunavut and Nova Scotia showed higher levels of dissatisfaction.

Key insights include:

- **Public Safety** received the highest positive ratings.
- **Tax Value** and **Housing** emerged as significant areas of concern, with many expressing dissatisfaction.
- General service satisfaction scores range from 7 to 8.
- A strong link exists between satisfaction with **municipal services** and the likelihood of **recommending** the municipality, with some exceptions. (e.g. Areas like Saskatchewan showed higher dissatisfaction compared to the national average.)
- **Personal factors** such as Employment and Unemployment does not significantly affect overall satisfaction.
- **Income levels** which were assumed to affect satisfaction did not show a strong impact on satisfaction.

RECOMMENDATION:

- Focus improvements on **Children Services**, **Social Assistance Services**, and **Housing Services**.
- Despite low service satisfaction, most participants prefer maintaining current tax levels with possible service reductions due to the high cost of living.
- 34% of participants are considering leaving due to housing affordability issues.

This dashboard allows municipal officials to investigate specific factors affecting satisfaction in their regions, aiming to enhance the quality of life for residents.
