

Systems Analysis of Social Exclusion in Indonesia

Systems thinking · mixed-method synthesis · award-winning Map the System project

Project framing: Used LGBTQ inclusion as the case context for a broader systems-analysis project on social exclusion. The work emphasized how visible incidents are shaped by recurring patterns, institutional structures, media narratives, and social beliefs — and how analysis can identify more realistic leverage points than single-cause explanations.

Systems Analysis of Social Exclusion in Indonesia

Iceberg model for understanding visible events, recurring patterns, underlying structures, and mental models.

A safer public-facing summary of the systems lens used in the project.

Iceberg model used to separate visible events from patterns, structures, and mental models.

Analytical approach - Reviewed research, reports, news/media coverage, public documents, and interviews. - Combined cited evidence with descriptive trend tracking and analyst interpretation. - Used systems mapping, causal-loop thinking, and the iceberg model to structure the issue.	Systems lens - Mapped exclusion as a reinforcing system rather than a set of isolated incidents. - Examined how narratives, public reactions, institutional signals, and media framing can compound. - Focused on feedback loops, unintended consequences, and intervention points.
Leverage-point framing - Identified policy/legal clarity, responsible media framing, local support, and gradual social integration as levers. - Highlighted that highly visible external support can create backlash if it is not locally grounded. - Translated complex findings into stakeholder-facing recommendations.	What this demonstrates - Ambiguous problem framing and evidence synthesis. - Mixed-method analysis across qualitative, media, policy, and trend inputs. Strategic thinking: systems awareness, stakeholder sensitivity, and recommendation design.

Recognition: Won first place at both the Humber IGS Map the System showcase and the Canadian national Map the System finals while representing Humber College. Public-facing version summarized to emphasize professional analysis, systems thinking, and transferable problem-framing skills.
